3 Debussy currently produces one product for which the following information is available:

Product <b>D946</b>	\$ per unit
Selling price	6.00

Variable overheads	1.10
Total fixed costs	\$120 000 per annum
Sales per annum (units)	200 000

**REQUIRED**

(a) Using the data for the current product **D946** calculate the following:

(i) break – even point in units **and** sales value;

(b) Prepare the contribution to sales (profit/volume) graph, using the chart below, for the current product **D946**. Clearly show the profit at the current sales level.

[4]

Debussy is considering extending its product range with two additional products.

The fixed costs would double to \$240 000 if any new product was introduced and would apply regardless of the number of new products introduced.

	<b>Product D947</b>	<b>Product D948</b>
	\$ per unit	\$ per unit
Selling price	9.00	13.00
Direct materials	6.60	7.00
Direct labour	2.40	2.10
Variable overheads	1.50	0.90
Sales per annum (units)	50 000	30 000

The demand for each product is estimated to be fixed at the levels stated, regardless of whether one or two additional products are introduced.

The existing workforce is currently operating at full capacity in the production of product D946.

**REQUIRED**

(c) Debussy decides to extend the product range with **both** additional products.

Calculate the maximum profit Debussy could achieve in the next full year, if it were to produce products **D946, D947** and **D948**.

Show clearly the total contribution per product.
