**ECONOMICS****0455/23**

Paper 2 Structured Questions

**May/June 2024**

MARK SCHEME

Maximum Mark: 90

---

**Published**

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the May/June 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level and Cambridge Pre-U components, and some Cambridge O Level components.

---

This document consists of **27** printed pages.

**PUBLISHED****Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

**GENERIC MARKING PRINCIPLE 1:**

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

**GENERIC MARKING PRINCIPLE 2:**

Marks awarded are always **whole marks** (not half marks, or other fractions).

**GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

**GENERIC MARKING PRINCIPLE 4:**

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

**GENERIC MARKING PRINCIPLE 5:**

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

**GENERIC MARKING PRINCIPLE 6:**

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

**PUBLISHED****Social Science-Specific Marking Principles  
(for point-based marking)****1 Components using point-based marking:**

- Point marking is often used to reward knowledge, understanding and application of skills. We give credit where the candidate's answer shows relevant knowledge, understanding and application of skills in answering the question. We do not give credit where the answer shows confusion.

From this it follows that we:

- a** DO credit answers which are worded differently from the mark scheme if they clearly convey the same meaning (unless the mark scheme requires a specific term)
- b** DO credit alternative answers/examples which are not written in the mark scheme if they are correct
- c** DO credit answers where candidates give more than one correct answer in one prompt/numbered/scaffolded space where extended writing is required rather than list-type answers. For example, questions that require *n* reasons (e.g. State two reasons ...).
- d** DO NOT credit answers simply for using a 'key term' unless that is all that is required. (Check for evidence it is understood and not used wrongly.)
- e** DO NOT credit answers which are obviously self-contradicting or trying to cover all possibilities
- f** DO NOT give further credit for what is effectively repetition of a correct point already credited unless the language itself is being tested. This applies equally to 'mirror statements' (i.e. polluted/not polluted).
- g** DO NOT require spellings to be correct, unless this is part of the test. However spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. Corrasion/Corrosion)

**2 Presentation of mark scheme:**

- Slashes (/) or the word 'or' separate alternative ways of making the same point
- Semi colons (;) bullet points (•) or figures in brackets (1) separate different points
- Content in the answer column in brackets is for examiner information/context to clarify the marking but is not required to earn the mark (except Accounting syllabuses where they indicate negative numbers).

**3 Calculation questions:**

- The mark scheme will show the steps in the most likely correct method(s), the mark for each step, the correct answer(s) and the mark for each answer
- If working/explanation is considered essential for full credit, this will be indicated in the question paper and in the mark scheme. In all other instances, the correct answer to a calculation should be given full credit, even if no supporting working is shown
- Where the candidate uses a valid method which is not covered by the mark scheme, award equivalent marks for reaching equivalent stages
- Where an answer makes use of a candidate's own incorrect figure from previous working, the 'own figure rule' applies: full marks will be given if a correct and complete method is used. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

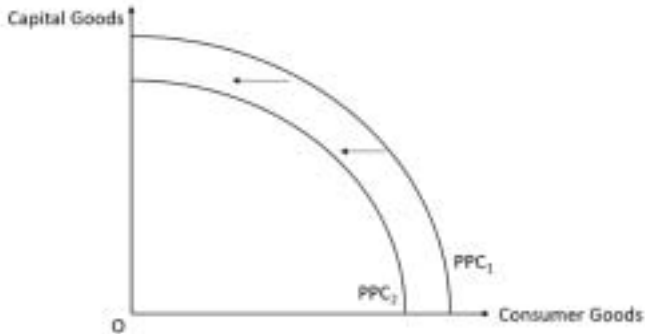

**4 Annotation:**

- For point marking, ticks can be used to indicate correct answers and crosses can be used to indicate wrong answers. There is no direct relationship between ticks and marks. Ticks have no defined meaning for levels of response marking
- For levels of response marking, the level awarded should be annotated on the script
- Other annotations will be used by examiners as agreed during standardisation, and the meaning will be understood by all examiners who marked that paper.

**PUBLISHED**Common examiner annotations on 0455/2281/0987 and 2286

	Uncertain what the candidate means – an illogical line of thought			MAX
	Benefit of the doubt			Not answered question
	Blank page			Not established – a statement made without any support
	Caret – a word is missing			Repetition
	Confused			SEEN
	Cross			Tick – a credit worthy point
	Highlight			Too vague
	Nothing creditworthy			
	Level 1			
	Level 2			
	Level 3			

Question	Answer	Mark	Guidance
1(a)	<p><b>Calculate the percentage contribution of Jakarta to Indonesia's GDP in 2021.</b></p> <p>27.3%, 27.27%, 27.2%, 27%</p>	1	Accept without the percentage sign.
1(b)	<p><b>Identify <u>two</u> examples of external costs ignored by the free market.</b></p> <p>air pollution (1) rising sea levels/floods (1) disease / mosquitoes (1) climate change (1)</p>	2	
1(c)	<p><b>Explain how real GDP per head can be an indicator of living standards.</b></p> <p>Real GDP per head has been adjusted for population / inflation / takes account of the cost of living (1).            Low real GDP per head leads to a fall in living standards (1) because lower GDP per head would mean lower income / real GDP per head is average income (1) reducing consumption / material wellbeing / influencing how much people can spend / whether they can buy basic necessities (1).</p>	2	Accept answers based on either higher or lower GDP per head.

Question	Answer	Mark	Guidance
1(d)	<p><b>Explain <u>two</u> ways climate change can lead to a fall in the Human Development Index (HDI) of Indonesia.</b></p> <p>Logical explanation which might include:</p> <p>Schools have been flooded (1) reducing education levels / mean years of schooling / expected years of schooling (1).</p> <p>Floods have led to an increase in diseases (transmitted through water and mosquitoes which breed in water) (1) reducing health level / life expectancy / increasing death rate (1).</p> <p>Farmland has been submerged, (cutting off a vital source of income of many farmers) / roads have been destroyed (1) reducing income levels / GNI per capita / GDP per capita / living standards (1).</p>	4	<p>One mark each for each of two ways identified and one mark for each of two explanations.</p> <p>Accept an explanation combining two different ways, e.g. increase in diseases reducing education levels.</p>
1(e)	<p><b>Draw a production possibility curve (PPC) diagram to show the impact of climate change on an economy such as Indonesia.</b></p> <p>PPC diagram:            Axes correctly with different outputs (1).            Initial curve drawn as a curve/line sloping downward to the axes (1).            New curve drawn as a curve/line sloping downward to the axes (1).            Shift to the left indicated by arrow(s) or letters or numbers e.g. PPC1 to PPC2 (1).</p>	4	

Question	Answer	Mark	Guidance
1(f)	<p><b>Analyse the relationship between GDP and government spending on the environment.</b></p> <p>Coherent analysis which might include:            Expected relationship: direct relationship / move in the same direction (1) higher GDP may lead to higher government spending on the environment / higher government spending on the environment may increase GDP (1).</p> <p>Supporting evidence: Japan has highest GDP and highest spending on environment (1) France has second highest GDP and second highest spending on environment (1) Thailand has lowest GDP and lowest spending on environment (1).</p> <p>Analysis: Higher GDP may create more pollution, therefore countries have more to spend on environment / high government spending on the environment can reduce pollution/climate change (1). Higher tax revenue / more education and so more concern for the environment / a cleaner environment can raise productivity (1). Higher GDP therefore more developed and can spend more on other objectives such as protection of the environment (1).</p> <p>Exception: Switzerland/Indonesia (1) Switzerland has lower GDP than Indonesia but higher expenditure on environment/ Indonesia has higher GDP and lower expenditure on environment than Switzerland (1).</p> <p>Analysis of the exception: These countries may be facing different pressures on government spending e.g. higher level of poverty (1).</p>	5	Responses do not have to be in the format suggested but they should address the expected/normal relationship, offer supporting evidence of that, highlight any exceptions to that, and analyse the overall data.

Question	Answer	Mark	Guidance										
1(g)	<p><b>Discuss whether or not internal migration benefits an economy such as Indonesia.</b></p> <p>Award up to 4 marks for logical reasons why it might, which may include:</p> <ul style="list-style-type: none"> <li>• higher production of different crops (1) more income / higher living standards (for farmers) (1)</li> <li>• less pressure on government resources / natural resources (1) e.g., less overcrowding (1) less spending on healthcare if people move away from areas of flooding/ mosquitoes (1)</li> <li>• labour force may increase in some areas (1) moving from low productivity areas to high productivity areas(1) increasing output (1)</li> <li>• housing may be cheaper / more available in some areas (1) reducing cost of living for workers (1)</li> <li>• migration may be to high wage areas (1) boosting total demand (1)</li> <li>• fewer resources may be wasted (1) if migration is to an area where they are under-used e.g. schools, hospitals (1).</li> </ul> <p>Award up to 4 marks for logical reasons why it might not, which may include:</p> <ul style="list-style-type: none"> <li>• as workers migrate, it could also lead to the collapse of entire communities (1) without workers (1) less demand for goods and services in the area (1)</li> <li>• increased inequality between more mobile labour and less mobile labour (1) as some workers who cannot move will not be able to find jobs (1) and gain higher income (1)</li> <li>• more pressure on government resources in areas they move to (1) more overcrowding in those areas / housing shortages (1) external costs (1) more pollution / congestion (1).</li> </ul>	6	<p><b>Apply this example to all questions with the command word DISCUSS</b>  <b>(1g, 1h, 2d, 3d, 4d and 5d)</b></p> <p>Accept the reverse argument, (e.g. for Q1g internal migration may be to a less polluted area) but recognise that each point may be credited only once, on either side of an argument, but separate development as to how/why the outcome may differ is rewarded.</p> <table border="1" data-bbox="1272 555 2027 1118"> <thead> <tr> <th data-bbox="1272 555 1912 620">Generic example</th> <th data-bbox="1912 555 2027 620">mark</th> </tr> </thead> <tbody> <tr> <td data-bbox="1272 620 1912 684">Tax revenue may decrease...</td> <td data-bbox="1912 620 2027 684">1</td> </tr> <tr> <td data-bbox="1272 684 1912 783">...because of reason e.g. incomes may be lower.</td> <td data-bbox="1912 684 2027 783">1</td> </tr> <tr> <td data-bbox="1272 783 1912 917">Tax revenue may increase because incomes may be higher i.e. reverse of a previous argument.</td> <td data-bbox="1912 783 2027 917">0</td> </tr> <tr> <td data-bbox="1272 917 1912 1118">Tax revenue may increase because of a different reason i.e. <u>not</u> the reverse of a previous argument e.g. government spending on subsidies may stimulate the economy more than spending on education.</td> <td data-bbox="1912 917 2027 1118">1</td> </tr> </tbody> </table>	Generic example	mark	Tax revenue may decrease...	1	...because of reason e.g. incomes may be lower.	1	Tax revenue may increase because incomes may be higher i.e. reverse of a previous argument.	0	Tax revenue may increase because of a different reason i.e. <u>not</u> the reverse of a previous argument e.g. government spending on subsidies may stimulate the economy more than spending on education.	1
Generic example	mark												
Tax revenue may decrease...	1												
...because of reason e.g. incomes may be lower.	1												
Tax revenue may increase because incomes may be higher i.e. reverse of a previous argument.	0												
Tax revenue may increase because of a different reason i.e. <u>not</u> the reverse of a previous argument e.g. government spending on subsidies may stimulate the economy more than spending on education.	1												

Question	Answer	Mark	Guidance
1(h)	<p><b>Discuss whether or not relocating the capital city from Jakarta will benefit the Indonesian economy.</b></p> <p>Award up to 4 marks for logical reasons why it might, which may include:</p> <ul style="list-style-type: none"> <li>• the new city will provide new job opportunities (1) decreasing unemployment in Indonesia (1) increasing incomes / economic growth (1)</li> <li>• reduce inequality between the different regions of Indonesia (1) reducing social dissatisfaction / increase standards of living of everyone in Indonesia (1)</li> <li>• better environment as new city is carbon-neutral / less pollution (1) reduced external costs (1)</li> <li>• better health for population of Indonesia (1) higher productivity (1)</li> <li>• fewer floods that require expenditure to repair the damage (1)</li> <li>• foreign investors may be more willing to relocate to Indonesia (1).</li> </ul> <p>Award up to 4 marks for logical reasons why it might not, which may include:</p> <ul style="list-style-type: none"> <li>• cost of the move may be too high (1) opportunity cost in terms of other areas of government spending (1) e.g. education / healthcare in other regions (1) could result in higher taxes / government budget deficit (1)</li> <li>• the relocation is expected to benefit only a small number of people who already have the financial capital / connection to the government (1) inequality could rise (1)</li> <li>• people may be reluctant to leave Jakarta (1) causing the resources invested in the new city to be wasted (1).</li> </ul>	6	

Question	Answer	Mark	Guidance
2(a)	<p><b>Define <i>secondary sector</i> using an example apart from construction.</b></p> <p>The sector covering construction and manufacturing / the sector that processes raw materials (1) e.g. car manufacturing (1).</p>	2	Accept covers manufacturing / production of goods.
2(b)	<p><b>Explain <u>two</u> key resource allocation decisions.</b></p> <p>Logical explanation which might include:</p> <ul style="list-style-type: none"> <li>• what to produce (1) a decision on what types of products that an economy needs to produce e.g. capital goods vs consumer goods / necessities vs luxuries (1)</li> <li>• how to produce (1) seeking the most efficient methods / where the methods to produce the goods and services needs to be decided / capital-intensive vs labour-intensive (1)</li> <li>• for whom to produce (1) for those who can pay for the goods and services / for the target market / sector of the economy for whom the goods should be produced / those who need it vs those who want it (1).</li> </ul>	4	<p>One mark each for each of two decisions identified and one mark for each of two explanations.</p> <p>Accept answers based on resource allocation decisions made by firms e.g. demand for a firm's products.</p>

Question	Answer	Mark	Guidance
2(c)	<p><b>Analyse why workers may want to migrate to another area.</b></p> <p>Coherent analysis which might include:</p> <ul style="list-style-type: none"> <li>• to gain higher incomes (1) as there are more / better jobs opportunities available in another area / more opportunities to use skills (1) since there are more employers / economic activity (1)</li> <li>• to have better living standards (1) better public amenities (1) such as better health and education facilities (1)</li> <li>• to move from areas with housing shortages (1) for cheaper / better housing (1)</li> <li>• to move from areas where prices / cost of living is high (1) move to area with lower taxes (1) increase purchasing power / living standards (1)</li> <li>• to have better working conditions (1) more job security (1)</li> <li>• to be closer to friends / family (1) who have migrated previously (1)</li> <li>• to escape wars / high crime (1) more security (1) to avoid losing lives / lives of family members (1)</li> <li>• to gain more freedom (1) fewer laws / restrictive regulations (1)</li> <li>• climate change (1) original area no longer habitable / cannot plant crops (1) relocate to areas where there are better soil / fewer floods / fewer natural disasters / less pollution (1).</li> </ul>	6	<p>Accept internal and external migration.</p> <p>Maximum of 3 marks for identifying reasons.</p>

Question	Answer	Mark	Guidance												
2(d)	<p><b>Discuss whether or not a government should introduce a maximum price on housing.</b></p> <p>In assessing each answer, use the table opposite.</p> <p>Why it might:</p> <ul style="list-style-type: none"> <li>• reduces price of housing / makes housing more affordable</li> <li>• to control (cost-push) inflation</li> <li>• to improve labour mobility / increase labour force available</li> <li>• ensures everyone has shelter, a basic necessity</li> <li>• leaves enough money to buy other needs and wants, increasing living standards</li> <li>• less inequality / reduces relative poverty.</li> </ul> <p>Why it might not:</p> <ul style="list-style-type: none"> <li>• discourages firms from supplying housing / reduces profits</li> <li>• may reduce housing quality if firms wish to maintain profit levels</li> <li>• shortage of housing if maximum price is below the equilibrium</li> <li>• no effect if maximum price is set above the equilibrium price</li> <li>• creation of informal markets at higher prices – lower standards</li> <li>• maximum prices might still be too high and unaffordable</li> <li>• the maximum price introduced may not take location into account.</li> </ul>	8	<table border="1"> <thead> <tr> <th data-bbox="1270 213 1384 279">Level</th> <th data-bbox="1384 213 1912 279">Description</th> <th data-bbox="1912 213 2027 279">Marks</th> </tr> </thead> <tbody> <tr> <td data-bbox="1270 279 1384 853" style="text-align: center;">3</td> <td data-bbox="1384 279 1912 853">A reasoned discussion which accurately examines both sides of the economic argument, making use of economic information and clear and logical analysis to evaluate economic issues and situations. One side of the argument may have more depth than the other, but overall both sides of the argument are considered and developed. There is thoughtful evaluation of economic concepts, terminology, information and/or data appropriate to the question. The discussion may also point out the possible uncertainties of alternative decisions and outcomes.</td> <td data-bbox="1912 279 2027 853" style="text-align: center;">6–8</td> </tr> <tr> <td data-bbox="1270 853 1384 1189" style="text-align: center;">2</td> <td data-bbox="1384 853 1912 1189">A reasoned discussion which makes use of economic information and clear analysis to evaluate economic issues and situations. The answer may lack some depth and development may be one-sided. There is relevant use of economic concepts, terminology, information and data appropriate to the question.</td> <td data-bbox="1912 853 2027 1189" style="text-align: center;">3–5</td> </tr> <tr> <td data-bbox="1270 1189 1384 1396" style="text-align: center;">1</td> <td data-bbox="1384 1189 1912 1396">There is a simple attempt at using economic definitions and terminology. Some reference may be made to economic theory, with occasional understanding.</td> <td data-bbox="1912 1189 2027 1396" style="text-align: center;">1–2</td> </tr> </tbody> </table>	Level	Description	Marks	3	A reasoned discussion which accurately examines both sides of the economic argument, making use of economic information and clear and logical analysis to evaluate economic issues and situations. One side of the argument may have more depth than the other, but overall both sides of the argument are considered and developed. There is thoughtful evaluation of economic concepts, terminology, information and/or data appropriate to the question. The discussion may also point out the possible uncertainties of alternative decisions and outcomes.	6–8	2	A reasoned discussion which makes use of economic information and clear analysis to evaluate economic issues and situations. The answer may lack some depth and development may be one-sided. There is relevant use of economic concepts, terminology, information and data appropriate to the question.	3–5	1	There is a simple attempt at using economic definitions and terminology. Some reference may be made to economic theory, with occasional understanding.	1–2

Question	Answer	Mark	Guidance
4(a)	<p><b>Define a <i>trade in goods deficit</i>.</b></p> <p>Expenditure on imports (of goods) exceeds revenue from exports (of goods) (2). Imports exceed exports (1).</p>	<b>2</b>	
4(b)	<p><b>Explain <u>two</u> ways firms can be classified.</b></p> <p>Logical explanation which might include:</p> <p>By stage (1): primary / secondary / tertiary (1) according to the product produced (1). By sector (1) private sector / public sector (1) according to who owns the firm (1). By size (1) according to amount of output produced / number of workers employed (1). By location (1) MNC or domestically-based (1) according to whether operates in more than one country (1). By level of competition (1) may be a monopoly or competitive firm (1). By use of factors of production (1) capital intensive or labour intensive (1).</p>	<b>4</b>	One mark each for each of two ways identified and one mark for each of two explanations.

Question	Answer	Mark	Guidance
4(c)	<p><b>Analyse why a government may protect its country's industries from foreign competition.</b></p> <p>Coherent analysis which might include:            To improve / stop decline of the balance of payments (1) by increasing exports / reducing imports (1) increasing economic growth (1).            To protect infant (sunrise) industries (1) allow growth in order to take advantage of economies of scale (1) charge lower prices (1).            To protect declining (sunset) industries (1) allow industries to decline gradually (1) unable to replace workers leaving / retiring (1) to protect jobs / avoid rising unemployment (1).            To protect strategic industries (1) to ensure supply of e.g. food (1) not disrupted by e.g. economic sanctions (1).            To protect industries from unfair competition (1) e.g. dumping (1) government subsidies (1).</p>	6
