## Worksheet 7: Spotting analysis

---

- 1 A decrease in income reduces the demand for luxury holidays because fewer people are interested in them.  

---
- 2 An increase in the number of firms in an industry is caused by a rightward shift of the industry supply curve.  

---
- 3 If a tax on a price elastic product is imposed, government tax revenue increases.  

---
- 4 Market failure can be caused by demerit goods because they are overconsumed due to information failure and too many scarce resources are allocated to economically undesirable output.  

---
- 5 Secretaries earn less than doctors because they work less.  

---
- 6 A decrease in price increases the firm's profit.  

---
- 7 An increase in price reduces the quantity demanded of a product because the firm's total revenue decreases.  

---
- 8 An increase in government spending on education increases wages, costs of production and inflation.  

---
- 9 A fall in aggregate demand can reduce economic growth because it leads to a fall in national output, so fewer goods and services are produced.  

---

10 Higher spending on education leads to increased taxation.

---

11 Lower interest rates may not increase spending.

---

12 Effective supply-side policies increase long-run aggregate supply and therefore, the economy's productive capacity increases, leading to reduced inflationary pressure.

---

13 Economic growth can be caused by an advancement in technology.

---

14 Demand-pull inflation is caused by higher spending.

---

15 Higher GDP per head leads to longer life expectancy.

---

16 A decrease in unemployment benefits can reduce poverty, as it increases incentives to work and encourages the unemployed to take up jobs, which increases their earnings.

---

17 An increase in exports leads to a surplus on the current account of the balance of payments.

---
