Paper 3 Advanced Theory MARK SCHEME Maximum Mark: 75

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **15** printed pages.

# **Generic Marking Principles**

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

# GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

# GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

### **GENERIC MARKING PRINCIPLE 3:**

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

#### GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

# GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

# GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Question	Answer	Marks
1(a)	One mark per mark point (Max 3)	3
	<ul> <li>MP1 The data to be transmitted is divided into equal sized packets</li> <li>MP2 A packet header is attached to each packet containing key information</li> <li>MP3 such as source/destination IP addresses, packet number, etc</li> <li>MP4 Packets are transmitted independently</li> <li>MP5 and may travel though different routes/paths to the destination</li> <li>MP6 Routes are determined using a routing table//Packets take the optimum route depending on congestion</li> <li>MP7 The packets usually arrive out of order</li> <li>MP8 The packets are reassembled in the correct order at the destination // The packets are re-ordered using the sequence number/the header</li> <li>MP9 If packets are missing/corrupted a re-transmission request is sent / packets are re-sent.</li> </ul>	
1(b)	One mark for each benefit (Max 2)	4
	<ul> <li>MP1 Packets are more likely to arrive because they can be re-routed if a problem occurs with one of the routes//Packets are more likely to arrive because if a packet is lost, it can be re-transmitted</li> <li>MP2 Bandwidth can be shared allowing packets from different messages to share the same path</li> <li>MP3 Considered secure as the packets generally travel via different routes</li> <li>MP4 High data transmission rate is possible</li> </ul>	
	One mark for each drawback (Max 2)	
	<ul> <li>MP5 Time delay because packets need to be re-ordered/reassembled at the destination//Time delay caused by missing packets needing to be re-sent//Time delay because it has to share the bandwidth of the circuit / channel with other packets</li> <li>MP6 Requires a complex algorithm to function</li> <li>MP7 Needs lots of RAM to handle large amounts of data.</li> </ul>	

Question	Answer	Marks
2(a)	One mark per mark point (Max 2)	2
	<ul> <li>MP1 Records are stored one after the other as they are collected // records are stored in chronological order</li> <li>MP2 New records are appended to the end of the file.</li> </ul>	
2(b)	One mark for a use (Max 1)	1
	MP1 Creating unsorted / temporary transaction files MP2 Creating data logging files	

Question	Answer	Marks
3(a)	One mark per mark point (Max 3)	3
	<ul> <li>MP1 A user-defined record data type is a composite data type</li> <li>MP2 It uses other data types in its definition to form a single new data type</li> <li>MP3 The data types referenced may be primitive data types from a programming language or they may be other user- defined data types.</li> <li>MP4 Includes related items</li> <li>MP5 Includes a fixed number of items.</li> </ul>	
3(b)	One mark for TYPE Order and ENDTYPE correct One mark for correct use of DECLARE in all declarations seen One mark for the two shaded declarations One mark for the two unshaded declarations	4
	Example answer	
	TYPE Order DECLARE AccountNumber : INTEGER DECLARE OrderNumber : INTEGER DECLARE OrderPrice : REAL DECLARE OrderDate : DATE ENDTYPE	

Question	Answer	Marks							
4(a)	e mark for working								
	moving the binary point 7 places // multiplying by 2 <sup>7</sup> /128 in the fractions method // 64 + 4 + 2 +1 + .25+ .125 + .0625 seen								
	One mark for correct answer								
	• 71.4375 // 71 <sup>7</sup> / <sub>16</sub>								
4(b)	One mark per mark point (Max 2)	4							
	<ul> <li>correct mantissa – exact answer only</li> <li>correct exponent – exact answer only</li> </ul>								
	Mantissa Exponent								
	1 0 0 1 1 1 0 1 1 0 1 0 1 0 1 0								
	<ul> <li>One mark per mark point for working (Max 2)</li> <li>number converted to binary e.g., positive binary version of 49.1875 = 0110001.0011 //</li> </ul>								
	two's complement version bits flipped and 1 added = $1001110.1101 //$ -64 + 8 + 4 + 2 + .5 + .25 + .0625 // -64 + 14.8125 • use of the exponent e.g. moving the binary point 6 places / × 2 <sup>6</sup> .								

Question	Answer	Marks
5(a)	One mark for each correct name (Max 2) One mark for each correct corresponding expansion (Max 2)	4
	MP1 HTTP/HTTPS MP2 For sending and receiving / transferring web pages / hypertext	
	MP3 FTP MP4 For sending and receiving files over a network / between devices	
	MP5 POP3 MP6 Pull protocol / for receiving / downloading emails	
	MP7 IMAP MP8 Pull protocol / for receiving / downloading emails	
	MP9 SMTP MP10 Push protocol / for sending / uploading emails	
	MP11 BitTorrent MP12 Peer-to-peer file sharing over a network	
5(b)	One mark per mark point (Max 3)	3
	<ul> <li>MP1 The application layer provides access to all the programs that exchange data // Interacts directly with user.</li> <li>MP2 used by, for example, web browsers, server software.</li> <li>MP3 Communicates/enables data transfer to/from Transport layer // It allows applications to access the services used in other TCP/IP layers.</li> <li>MP4 It defines the protocols that any application uses to allow the exchange of data.</li> </ul>	

	i								
Question							Answer	Marks	
6(a)	Three matrix Two mark One mark $(X =) \overline{A}.\overline{B}$	<b>Three</b> marks for all eight correct products <b>and</b> no additional products <b>Two</b> marks for five, six or seven correct products <b>One</b> mark for three or four correct products $(X =) \overline{A}. \overline{B}. \overline{C}. D + \overline{A}. \overline{B}. \overline{C}. \overline{D} + \overline{A}. \overline{B}. \overline{C}. D + \overline{A}. \overline{B}. \overline{C}. \overline{D} + \overline{A}. \overline{B}. \overline{C}. \overline$							
6(b)	Two mark One mark	ks if no e k if one e	errors pre error pres	esent sent				2	
		AB							
	CD		00	01	11	10			
		00	0	0	0	0			
		01	1	1	1	1			
		11	0	0	0	0			
		10	1	1	1	1			
6(c)	One mark	for eac	h correct	: loop <b>(M</b> a	ax 2)			2	
	CD		00	01	11	10			
		00	0	0	0	0			
		01	1	1	1	1			
		11	0	0	0	0			
		10	1	1	1	1			

Question	Answer	Marks
6(d)	One mark for each mark point (Max 2)	2
	<ul> <li>MP1 Any correct relevant Boolean term</li> <li>MP2 Boolean terms with correct operator + and no other terms present</li> </ul>	
	$(X =) C. \overline{D} + \overline{C}. D // \overline{C}. D. + C. \overline{D}$	

Question	Answer	Marks
7(a)	One mark per mark point (Max 2)	2
	<ul> <li>MP1 21 - a number must begin with an odd digit, 2 is even</li> <li>MP2 123 - a number can only be one or two digits in length not three</li> </ul>	
7(b)	One mark per mark point (Max 2)	2
	<pre>MP1 <symbol> ::= %   £   #   @   \$ MP2 <number> ::= <odd> <odd><even> <odd><odd>&lt;</odd></odd></even></odd></odd></number></symbol></pre>	
7(c)(i)	One mark per mark point (Max 3)	3
	<ul> <li>MP1 letter, number and symbol all included in correct order: letter first, followed by number, finishing with symbol</li> <li>MP2 provision for one or two numbers including relevant connectors</li> <li>MP3 all other connections and label correct and no additional data</li> </ul>	
	Example answer	
	code letter number symbol	

—

Question	Answer	Marks
7(c)(ii)	One mark per correct line (Max 2)	2
	<code> ::= <letter><number><symbol>  <letter><number><number><symbol></symbol></number></number></letter></symbol></number></letter></code>	
	OR	
	<code> ::= <letter><number><symbol>  <letter><number><symbol></symbol></number></letter></symbol></number></letter></code>	
	Alternative Answer	
	One mark per correct line (Max 2)	
	<pre><digits> ::= <number> <number><number> <code> ::= <letter><digits><symbol></symbol></digits></letter></code></number></number></number></digits></pre>	

Question	Answer	Marks
8	One mark per mark point (Max 4)	4
	<ul> <li>MP1 many instruction formats possible</li> <li>MP2 large instruction set</li> <li>MP3 many addressing modes available</li> <li>MP4 uses variable length/multi-operation instructions</li> <li>MP5 multi-clock cycle instructions</li> <li>MP6 complex decoding of instructions</li> <li>MP7 uses complex circuits</li> <li>MP8 makes frequent use of cache memory</li> <li>MP9 uses programmable control unit // uses micro-programmed control unit // uses hardwired control unit</li> <li>MP10 hardware needs to be able to handle more complex instructions convert into sub-instructions // Design emphasis is on the hardware.</li> </ul>	

#### 9618/32

Question	Answer	Marks
9(a)	One mark per mark point (Max 2)	2
	<ul> <li>MP1 the kernel receives a signal when an interrupt is generated</li> <li>MP2 the kernel checks the priority and reviews the status/priority of the current interrupts</li> <li>MP3 system enters kernel mode if the type of interrupt is of higher priority than the current process</li> <li>MP4 the kernel consults the interrupt dispatch table / IDT</li> <li>MP5 and saves the state of the interrupted process / contents of the registers on the kernel stack</li> <li>MP6 the kernel restores the process state e.g. contents of registers once the interrupt is serviced</li> </ul>	
9(b)(i)	One mark per mark point (Max 1)	1
	MP1 multi-tasking allows computers to carry out / seem to carry out more than one process at a time	
9(b)(ii)	One mark per mark point (Max 2)	2
	<ul> <li>MP1 processor time/common hardware and resources is/are shared between tasks</li> <li>MP2 scheduling is used to decide on the processes to be carried out to ensure multi-tasking operates correctly / efficiently / without clashes</li> <li>MP3 one task of a higher priority can interrupt another task that is currently running</li> </ul>	

Question	Answer	Marks			
10(a)	One mark per mark point (Max 3)				
	<ul> <li>MP1 Attributes/properties</li> <li>MP2 with their data types // are variables bound to the class</li> <li>MP3 Methods</li> <li>MP4 that are subroutines / functions / procedures that act upon the attributes</li> <li>MP5 Getters/setters</li> <li>MP6 are methods that can fetch / update the contents of attributes</li> <li>MP7 A constructor</li> <li>MP8 that is used to create instances / objects of this class.</li> </ul>				

Question	Answer				
10(b)	One mark per mark point (Max 3)				
	<ul> <li>MP1 A class is only defined once but many objects can be created from that class // A class is a template / blueprint from which objects are created // An object is an instance of a class</li> <li>MP2 No memory is allocated when a class is defined, but objects are allocated memory space whenever they are created</li> <li>MP3 A class cannot be manipulated as it is not available in the memory, but objects can be manipulated</li> <li>MP4 A class is defined but an object is declared / created / instantiated.</li> <li>MP5 A class can use inheritance. An object cannot.</li> </ul>				

Question	Answer	Marks
Question 11(a)	Answer         One mark per mark point (Max 4)         MP1       Five additional nodes with correct data values         MP2       Correct null pointers in all nodes (7) – no extra null pointers where the arrow points to the next node         MP3       Correct arrows to represent pointers joining parent nodes to child nodes – must come from the correct left or right pointer not the middle         MP4       All nodes in correct order and no additional data in left/right pointer boxes.         RootPtr	Marks 4

Question	Answer								
11(b)	First eight rows of table (Max 3) Three marks for all eight correct rows Two marks for six or seven correct rows One mark for three, four or five correct rows Last row of table and FreePtr (Max 1) One mark for correct FreePtr with last row of table completely blank								
	RootPt r	Index	LeftPtr	Data	RightP tr				
	0	0	1	25	2				
		1	3	4	4				
		2	-1	36	5				
		3	-1	1	-1				
		4	6	16	-1				
		5	7	64	-1				
	FreePt r	6	-1	9	-1				
	8	7	-1	49	-1				
		8							

#### 9618/32

Question	Answer	Marks
11(c)	One mark for any correct row (Max 4) FUNCTION SearchList(Item : INTEGER) RETURNS INTEGER	4
	NullPtr ← -1	
	NowPtr	
	WHILE NowPtr <> NullPtr	
	IF LinkList[NowPtr].Data < Item THEN
