Paper 4 A Level Structured Questions MARK SCHEME Maximum Mark: 100 9700/43 October/November 2024

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge International will not enter into discussions about these mark schemes.

Cambridge International is publishing the mark schemes for the October/November 2024 series for most Cambridge IGCSE, Cambridge International A and AS Level components, and some Cambridge O Level components.

This document consists of **15** printed pages.

Generic Marking Principles

These general marking principles must be applied by all examiners when marking candidate answers. They should be applied alongside the specific content of the mark scheme or generic level descriptions for a question. Each question paper and mark scheme will also comply with these marking principles.

GENERIC MARKING PRINCIPLE 1:

Marks must be awarded in line with:

- the specific content of the mark scheme or the generic level descriptors for the question
- the specific skills defined in the mark scheme or in the generic level descriptors for the question
- the standard of response required by a candidate as exemplified by the standardisation scripts.

GENERIC MARKING PRINCIPLE 2:

Marks awarded are always whole marks (not half marks, or other fractions).

GENERIC MARKING PRINCIPLE 3:

Marks must be awarded **positively**:

- marks are awarded for correct/valid answers, as defined in the mark scheme. However, credit is given for valid answers which go beyond the scope of the syllabus and mark scheme, referring to your Team Leader as appropriate
- marks are awarded when candidates clearly demonstrate what they know and can do
- marks are not deducted for errors
- marks are not deducted for omissions
- answers should only be judged on the quality of spelling, punctuation and grammar when these features are specifically assessed by the question as indicated by the mark scheme. The meaning, however, should be unambiguous.

GENERIC MARKING PRINCIPLE 4:

Rules must be applied consistently, e.g. in situations where candidates have not followed instructions or in the application of generic level descriptors.

GENERIC MARKING PRINCIPLE 5:

Marks should be awarded using the full range of marks defined in the mark scheme for the question (however; the use of the full mark range may be limited according to the quality of the candidate responses seen).

GENERIC MARKING PRINCIPLE 6:

Marks awarded are based solely on the requirements as defined in the mark scheme. Marks should not be awarded with grade thresholds or grade descriptors in mind.

Science-Specific Marking Principles

- 1 Examiners should consider the context and scientific use of any keywords when awarding marks. Although keywords may be present, marks should not be awarded if the keywords are used incorrectly.
- 2 The examiner should not choose between contradictory statements given in the same question part, and credit should not be awarded for any correct statement that is contradicted within the same question part. Wrong science that is irrelevant to the question should be ignored.
- 3 Although spellings do not have to be correct, spellings of syllabus terms must allow for clear and unambiguous separation from other syllabus terms with which they may be confused (e.g. ethane / ethene, glucagon / glycogen, refraction / reflection).
- 4 The error carried forward (ecf) principle should be applied, where appropriate. If an incorrect answer is subsequently used in a scientifically correct way, the candidate should be awarded these subsequent marking points. Further guidance will be included in the mark scheme where necessary and any exceptions to this general principle will be noted.

5 <u>'List rule' guidance</u>

For questions that require *n* responses (e.g. State **two** reasons ...):

- The response should be read as continuous prose, even when numbered answer spaces are provided.
- Any response marked *ignore* in the mark scheme should not count towards **n**.
- Incorrect responses should not be awarded credit but will still count towards *n*.
- Read the entire response to check for any responses that contradict those that would otherwise be credited. Credit should **not** be awarded for any responses that are contradicted within the rest of the response. Where two responses contradict one another, this should be treated as a single incorrect response.
- Non-contradictory responses after the first *n* responses may be ignored even if they include incorrect science.

6 <u>Calculation specific guidance</u>

Correct answers to calculations should be given full credit even if there is no working or incorrect working, **unless** the question states 'show your working'.

For questions in which the number of significant figures required is not stated, credit should be awarded for correct answers when rounded by the examiner to the number of significant figures given in the mark scheme. This may not apply to measured values.

For answers given in standard form (e.g. $a \times 10^n$) in which the convention of restricting the value of the coefficient (a) to a value between 1 and 10 is not followed, credit may still be awarded if the answer can be converted to the answer given in the mark scheme.

Unless a separate mark is given for a unit, a missing or incorrect unit will normally mean that the final calculation mark is not awarded. Exceptions to this general principle will be noted in the mark scheme.

7 <u>Guidance for chemical equations</u>

Multiples / fractions of coefficients used in chemical equations are acceptable unless stated otherwise in the mark scheme.

State symbols given in an equation should be ignored unless asked for in the question or stated otherwise in the mark scheme.

Mark scheme abbreviations

; A R I () AW underline max ora mp ecf AVP	separates marking points alternative answers for the same point accept (for answers correctly cued by the question, or by extra guidance) reject ignore the word / phrase in brackets is not required, but sets the context alternative wording (where responses vary more than usual) actual word given must be used by candidate (grammatical variants accepted) indicates the maximum number of marks that can be given or reverse argument marking point (with relevant number) error carried forward alternative valid point
AVP	alternative valid point

Question	Answer	Marks				
1(a)(i)	<pre>A = dendrite(s) ; B = nuclei ; C = synaptic knob(s) ;</pre>					
1(a)(ii)	1 rat has, myelin sheath / Schwann cell / myelinated axon / myelinated neurone;					
	2 (rat has) saltatory conduction OR (rat) impulse / action potential, jumps / leaps / AW, from (one) <u>node of Ranvier</u> to, the next / another;					
1(b)	any three from:					
	 snail / Fig. 1.3 greater depolarisation OR (membrane potential) gets more positive / has higher increase / has higher peak ; action potential, slower / takes longer / takes more time OR longer time to return to resting potential ; longer (absolute / relative) refractory period ; longer hyperpolarisation ; 					
	5 AVP;					

9700/43

Question	Answer	Marks
2(a)	any three from:	3
	 open in, day / light; to take in carbon dioxide for, photosynthesis / light-independent stage / Calvin cycle; close in, night / dark; to decrease water loss by transpiration; 	
2(b)	 any six from: hydrogen ions / protons / H ions / H⁺, leave (cell) using, energy / ATP ; low H⁺ (in cell) / more negative charge ; K⁺ / potassium ion, channel (proteins) open OR K⁺, move into / enter, cell (by facilitated diffusion) ; Cl⁻ ions, move into / enter (cell) ; water potential of cell decreases ; water moves in (to cell) by osmosis ; (cells) become turgid / swell / increase in volume / expand ; (guard cell) inner wall thicker / outer wall thinner, so cells, bend / curve ; 	6
2(c)	 (environment) light needed, to keep cycle normal / to achieve same peak % of stomata opening ; genes have a role as (regular), rhythm / pattern / cycle, continues, in darkness / without light ; 	2

Question	Answer							Marks
3(a)	event		sta	ige				4
		G	LR	кс	OP			l
	catabolism	~	~	~	×	;		l
	coenzyme is reduced or oxidised	~	~	~	~	;		l
	a coenzyme forms a covalent bond with a × ·							l
	carbon dioxide is released	×	~	~	×	;		I
3(b)(i)	any four from:							4
	 1 (RQ =) ratio of carbon dioxide (exhaled) to oxygen (inhaled); 2 air flow meter measures oxygen inhaled; 3 carbon dioxide sensor measures concentration of CO₂ exhaled; 4 carbohydrate RQ = 1; 5 lipid RQ = 0.7; 							
3(b)(ii)	any three from:							3
	 lipid has higher energy (value) OR carbohydrate 15–17 kJ g⁻¹ and lipid 37–40 kJ g⁻¹; more, hydrogen (atoms) / C-H bonds, in lipid ; more reduced, NAD / FAD; greater proton gradient / more protons in intermembrane space / more protons pass through ATP synth(et)ase; 							

Question	Answer	Marks
4(a)	 any three from: in Venus fly traps touch two (sensory hairs); protons, leave hinge cells / enter hinge cell walls; Ca²⁺ ions move into (hinge) cells; water moves into (hinge) cells; (hinge) cells, become turgid / swell / increase in volume / expand; 	3
4(b)	 any two from: 1 less / decreased, surface area (of leaf exposed); 2 less light absorbed by, chloroplasts / thylakoid membranes / grana / pigments / chlorophyll / light harvesting complexes / photosystems; 3 fewer stomata, exposed / available (to air); 4 less carbon dioxide, enters / absorbed; 	2
4(c)	 any six from: similarities photoactivation of chlorophyll; (energetic) electrons move, along / down, ETC; chemiosmosis; ATP produced; differences FSI and PSII in non-cyclic and only PSI in cyclic; photolysis / oxygen produced, in non-cyclic only; ORA reduced NADP in non-cyclic only; ORA electrons return to, same photosystem / PSI, in cyclic; 	6

Question	Answer	Marks
5(a)	 any two from: one / single, set of chromosomes; have n (number of) chromosomes / half of diploid number; chromosomes not in homologous pairs / only one of each homologous pair; each chromosome is different in, size / shape / genes / loci; 	2
5(b)	sexual reproduction: B and D ; mitosis: two from A , B , C , D ; meiosis: D ;	3
5(c)	 any three from: to maintain, chromosome / diploid, number ; from parents to offspring / from generation to generation ; to give genetic variation in, gametes / offspring / horses ; too many / extra, sets of chromosomes cause (named) problems ; 	3

Question	Answer					
6(a)(i)	 1 (excess) amino acids, deaminated / have amino group removed ; 2 in the liver ; 					
6(a)(ii)	any three from:					
	 osmoreceptors in hypothalamus (detect change / are receptors); effector(s): collecting duct / distal convoluted tubule / nephron; target cells: collecting duct (cells); 					

Question	Answer	Marks
6(b)	 any three from: 1 ultrafiltration / forms glomerular filtrate ; 2 high, hydrostatic / blood, pressure in, glomerulus / capillaries ; 3 so, water / (named) solutes, move (out of glomerulus / into Bowman's capsule) ; 4 through two of: fenestrae / fenestrations	3
6(c)	 any three from: 1 high(er / est), U:P / ratio → can tolerate water shortage; 2 high(er / est), U:P / ratio → much water reabsorbed / small volume of urine produced; 3 high(er / est), U:P / ratio → can, concentrate urine / conserve water OR high(er / est), U:P / ratio → (well) adapted to dry environment; 4 AVP; 	3

Question	Answer	Marks
7(a)(i)	any three from:	3
	 disruptive / diversifying (selection); extremes / carnivores and detritus feeders, survive / are selected for and intermediates, die / are selected against; high / intense, competition; intermediates, outcompeted for / don't get enough, detritus / algae, and, (fairy) shrimp / small animals; lack of / limited, food is selection pressure; AVP; 	

Question	Answer	Marks				
7(a)(ii)	 any three from: <u>stabilising</u> (selection); extremes / carnivores and detritus feeders, die / are selected against / are not selected for, and intermediates, survive / are selected for; low / less / prevents, competition; intermediates can eat, both types / all / a wider range, of food; greater variety in the diet improves the growth and development of (intermediate) tadpoles; 	3				
7(a)(iii)	number of tadpoles	1				
7(a)(iv)	 any two from: new species form due to reproductive isolation ; caused by, ecological / behavioural, separation / isolation / differences ; in same geographical region ; AVP ; 	2				
7(b)	 any three from: ref. to DNA sequence (for all / three species); find / count, nucleotide / base, differences / similarities; fewer differences means, more closely related / less time since divergence / less time to common ancestor; bioinformatics / database / software / BLAST; <i>S. hammondii</i> and <i>S. bombifrons,</i> have the fewest genetic differences / are the most genetically similar; 	3				

uestion			Ar	ารพ	er	Ма
8(a)	 any three from: 1 make cDNA from, m 2 using reverse transo 3 synthesise (gene ch 4 (using known) amin 	nessenger RNA / n criptase ; nemically) from <u>nu</u> o acid / nucleotide	nRNA ; <u>cleotides</u> / join <u>nuc</u> , sequence from d	leot atak	<u>ides</u> ; pase ;	
8(b)	role in genetic engineering	DNA ligase	DNA polymerase]	
	joins two sections of sugar phosphate backbone in DNA	\checkmark	×	;		
	adds a gene to a plasmid	✓	×	;	-	
	adds free activated DNA nucleotides to a polynucleotide	×	~	;		
8(c)	1 90–98°C − DNA, de 2 50–65°C − primers, 3 68–75°C − Taq / DN	natures / strands s bind / base pair / a A, polymerase, m	separate ; inneal (to DNA) ; akes, DNA / (new)	stra	and ;	

Question	Answer	Marks
9(a)	any four from:	4
	 both, <u>eukary</u>otic / <u>eukary</u>otes / in domain <u>Eukary</u>a ; example of eukaryotic feature ; 	
	Protoctista 3 example of way in which they vary (must give both);	
	 Fungi (max 3) 4 cell wall of, chitin / mannan / glucan; 5 hyphae / mycelium; 6 multinucleate / syncytium / many nuclei per cell; 7 heterotrophic / saprotrophic / parasitic; 8 store glycogen; 9 reproduce by spores; 	
9(b)(i)	any <i>three</i> from:	3
	 measures / gives information about, air, quality / pollution; other species may be harmed by, sulfur dioxide / acid rain / decrease in lichen (abundance / diversity); <i>ref. to</i> food web / species that feed on lichens; AVP; 	
9(b)(ii)	any two from:	2
	 role in food web / eaten by other (named) species ; provide, shelter / camouflage (for insects / invertebrates) ; clean the air / remove (named) pollutants / absorb toxins ; may have medical use ; <i>ref. to</i> other practical use ; primary colonisers / pioneer species / soil formation ; ethical / moral / aesthetic, reason ; to conserve genetic diversity / future use for genes ; 	

9700/43

Question	Answer				Marks
10(a)	(melanic x melanic) Aa x Aa (<i>Gametes</i>) A a and A a ; (<i>Offspring</i>) AA Aa Aa aa ; (melanic, melanic, melanic, typical) (<i>Ratio</i>) 3 melanic : 1 typical :				3
10(b)	it / (melanic) allele, is dominant;				1
10(c)(i)	melanic / dominant phenotype, is crossed with homozygous recessive;				1
10(c)(ii)		same locus (A / a)	different loci (A / a and B / b)		3
	genotypes of melanic moths from cross 1	AA Aa (aA) ;	AaBb Aabb aaBb ;		
	proportion of test crosses (cross 2) giving 100% melanic offspring	1 in 3	none/0;		
10(d)	(24 × 29) ÷ 8 ; = 87 ;				2
